## ABOUT ME

---

Motivated, adaptable, and detail-oriented individual with a background in Information Technology and a strong interest in communication-focused roles. Possesses excellent verbal and written communication skills, a positive attitude, and the ability to build strong relationships with people. Experienced in collaborating with teams, organizing tasks, and solving problems in fast-paced environments. Eager to contribute to an organization by delivering quality work, learning new skills, and providing professional and reliable support.

## EXPERIENCE

---

### Back-End Support / System Developer

Creative Lab Company

- Contributed to the development of a web-based system for motorcycle diagnostics, repair tracking, customer records, and shop operations using PHP and MySQL.
- Assisted in designing and organizing the MySQL database to efficiently manage customer information, repair details, and service history.
- Collaborated with team members in project planning, requirement discussions, troubleshooting, and system development, strengthening teamwork, communication, and problem-solving skills.

### ICT Services Management System

Back-End Developer (Academic Project)

- Developed core back-end features for a web-based ICT Services Management System using PHP and MySQL, supporting service requests, task monitoring, and equipment maintenance scheduling.
- Designed and managed MySQL databases while implementing CRUD operations, authentication, request handling, and activity logging for different user roles.
- Collaborated with teammates to discuss requirements, troubleshoot technical issues, gather feedback, and improve the overall system workflow while strengthening analytical and communication skills.
